**Codex lowers prices on its net management software
Firm also promises link to Accumaster Integrator**

Byline: Paul Desmond, Senior Editor

Journal: Network World Page Number: 13

Publication Date: July 02, 1990

Word Count: 766 Line Count: 55

Text:

MANSFIELD, Mass. --- Codex Corp. last week announced new pricing aimed at making its network management systems affordable for users that previously couldn't cost-justify them.

Codex also said it plans to supply a link between its high-end 9800 Series Integrated Network Management System and AT&T's Accumaster Integrator.

"We're broadening our horizons in terms of the size of networks we can manage, as well as providing broader interface capabilities through the AT&T interface and the promise of OSI compatibility there," said Jeff Walker, Codex's marketing director of network management.

Under the new 9800 pricing plan, users will be **charged** for software **based** on the quantity and **type** of **devices** in a net, each of which is assigned a point value.

Transmission products like modems and data service units (DSU) are worth one device point each, while high-end products such as T-1 multiplexers are worth 15 points, Walker said. Customers are charged \$10,000 for base software and then pay \$7,500 for a license covering their first 100 device points.

That makes the entry-level 9800 --- which includes the Hewlett-Packard Co. Apollo Division workstation on which it runs, training, installation and a year of software maintenance --- cost about \$40,000, according to Walker.

As networks grow, the cost of additional points goes down. The next \$7,50 buys 120 device points and then 140 points, on up to a maximum of 200.

Previously, the 9800 was priced according to the type of devices a user needed to manage, Walker said. Software for each product managed by the 9800 --- including modems, DSU/channel service units (DSU/CSU), statistical multiplexers, packet-switching equipment and T-1 multiplexers --- was sold separately. Users paid the same price for the software, regardless of how many of each device needed to be managed.

Codex's Release 4 of its 9300 series management system adds support for the company's 6500 family of low-end and mid-range X.25 packet assembler/disassemblers and packet switches. Previously, the system supported modems, DSU/CSUs and statistical multiplexers.

A remote access capability was also added that lets users dial into the 9300 from a remote asynchronous terminal.

In an effort to help reduce the total cost of the 9300 system for users with personal computers, Codex will specify other personal computers capable of running the 9300 software besides the HP Vectra it has traditionally sold with the software. Plus, Codex cut the price of the software itself by \$3,500.

For \$4,600, users can buy an entry-level 9300 software-only package for managing Codex modems. Previously, the same package cost \$13,000, although that price included an HP Vectra. The software is scheduled to be available this month.

Surprise to no one

Codex's announcement that it will develop a link between the 9800 and AT&T's Integrator came as no surprise to analysts.

Frank Dzubeck, president of Washington, D.C. consultancy Communications Network Architects, Inc., said Codex should have supported the Integrator when it was first announced, although he said the move makes Codex the first vendor to announce support for the integrated net management strategies of all three major players in that market: AT&T, Digital Equipment Corp. and IBM.

Walker said users only recently started asking for an Integrator link.

When the link is delivered later this year, it will only feed net management data from the 9800 to the Integrator; it will not allow the Integrator console operator to control the 9800, although Walker said that capability will be added at a later date.

Pricing is not yet final, but Walker said the 9800/Integrator link, which consists of a software upgrade to the 9800 system, will cost around \$15,000.
